

Finally - a self learning, personal, zero hardware, enterprise class email security solution - at an affordable price

No Hardware Required

Eliminate Bandwidth Abuse

Secure Data Facility

Every day in excess of 9B messages fail to reach their destination – What is spam costing your business?

Email has become the all pain, no gain, endless burden of expense, frustration and complaint.

The problem – SPAM is choking email and creating a black hole of expense for senders and recipients.

The solution – Integrated self learning personal technology. Vanquish - empowered mail systems are not held hostage by the endless costs in the battle against spam.

Built for your business

Users should not be tasked with regular review "of the thousands" of messages sent to the spam folder. Vanquish anti-spam picks up where filters leave off. Vanquish offers the only complete technology solution strong enough to protect an enterprise and yet personal enough to learn the messaging habits of each individual user.

Personal power to learn

One size (or rule, or technology) does not fit all. Vanquish stops spam with 5 complimenting technologies. Each technology intimately integrated, at the personal account level, to free the user from time wasting manual intervention.

Digital message certificates ensure the elimination of in-network spoofing and content alteration.

Smart Filtering

Learning each user's personal email context is performed via a self training Bayesian Statistical filter. Designed in concert with other V-Smart Features training each user's account is fast, transparent and continual.

v-Smart Ends the Spam Folder Review

Vanquish v-Smart Features are tightly integrated to work constantly on your behalf to assure messages from desirable sources are delivered.

- **Smart List™**: Automatically maintains a list of authorized senders.
- **Smart Subject™**: Allows email from anyone responding to a message sent by you.
- **SurfMatch™**: Recognized and allows an incoming message from an e-business where you have made a purchase, subscribed to a newsletter, requested a catalog or otherwise, asked for future information.
- **Personal Smart Filtering™**: Learns the context in which each user uses email and performs accordingly.

Avoid the filter trap

Does what filters alone can not

Restores email productivity

Personal Smart Features yield automatic best performance across all types of users

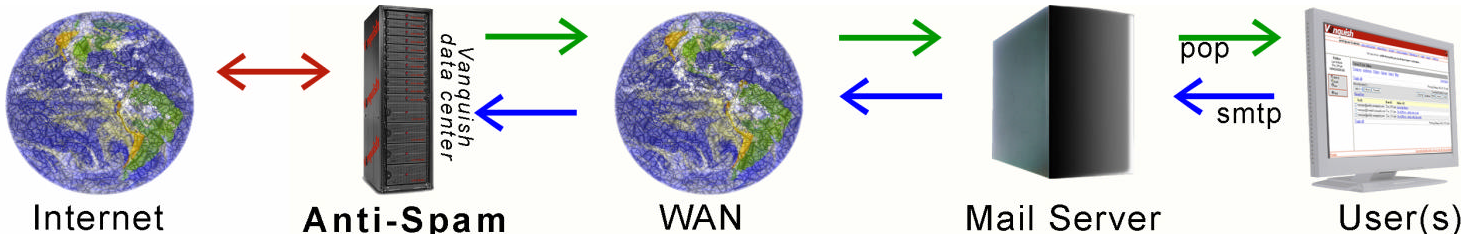

Affordability

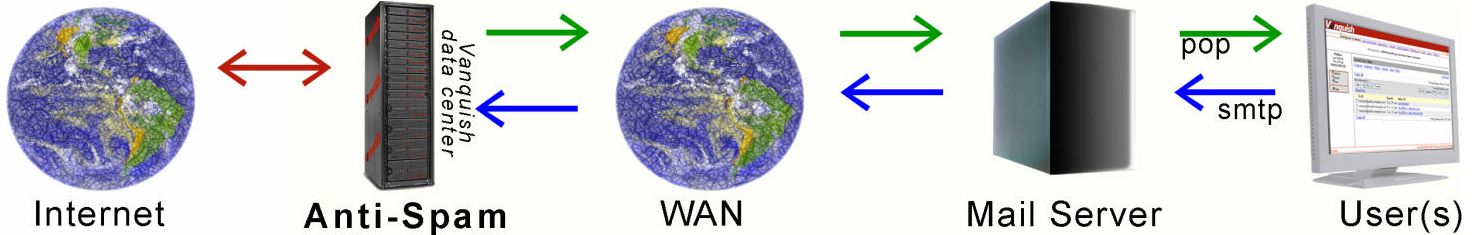

With the lowest price/performance ratio and no mental gymnastics required for training. Vanquish is the most affordable solution for ISPs, ESPs and Enterprises looking to control the abuse of spam without significant capital investment.

New! Vanquish vMail™ Technology

**End email abuse.
Restore productivity.**

- **Personal Smart Features**: Automatic, unlimited, and personalized learning ensures best performance for each user.
- **Anti-Virus**: Integrated Virus protection with automatic updating.
- **Identity Theft Protection**: Anti-Phishing technology to monitor again phishing attempts.
- **Enhanced Sender Confirmation**: Recommended by the Radicati Group as an integral part of a business solution to stopping spam. Helps ensure email delivery for legitimate senders. Eliminates the anxiety of "spam folder review."
- **Authentication Assurance**: SMTP signature authentication insures deliverability and authenticity of messages sent between business units.
- **Flexibility**: Supports all SMTP compliant mail systems.

Technical specifications:

Email Security Features:

- Smart Lists™, Smart Subject™, Personal Smart Filtering, Enhanced Sender Confirmation and The Penalty Button
- SMTP anti-virus, SMTP anti-phishing, SMTP anti-spyware

Hardware:

- None Required – Email is processed via Vanquish Secure Data-Center

Data Center Details:

- State-of-the-Art Tier 1 data center with Secure Access supported by N+1 fully redundant systems and designs for all required operating technologies (HVAC, Conditioned power, Core Date feed, Core Data Equipment and Core Data Routing.)

Implementation:

- VqNow - the Vanquish Virtual Service deploys all key features and benefits across an entire customer base or email server regardless of operating systems or email clients in use.
- The vqNow is an SMTP in-stream service logically placed prior to the email server(s) being protected. The physical location of the service supported by a Vanquish data center.

Bandwidth Recovery:

- Virtually placed prior to the protected mailserver(s), vqNow eliminates the bandwidth burden of spam by becoming the first destination point of email, via the MX definition, for the protected domain(s). After mail arrival at vqNow, only clean email is passed on to the downstream email server(s).
